

THAT'S WHY WE

Stay at home

Corona is a virus. Viruses are so small that you can only see them with a microscope. When the virus enters our body, we can become ill.

People who have become ill, often have a cough and fever or a pain in their lungs. But some people who have become infected don't have any of that.

Experts say that especially older or people who are already ill are in danger of becoming infected. That's why it is important that we keep enough distance to others.

The virus can jump on our hands, when we are outside and touch things or other people.

That's why we now have to wash our hands really well and wear a mask while out shopping - to protect other people and ourselves.

That's why it is now really important to stay at home and postpone any activities we had planned with our friends.

If you miss your friends, you can phone them, or you can write them a letter, or arrange a video chat.

Try to use your time in a positive way, and try to enjoy the time you have with your family, or be creative and try out new things.

STAY
healthy
AND
cheerful
